

Boostex Wallet — White Paper

1. Introduction Boostex Wallet is not just a crypto wallet. It's a full-scale platform designed to generate income in the Web3 space. We combine speed, simplicity, and powerful financial tools in one solution. Boostex users get access to asset management, staking, referral income, launchpad participation, and P2P trading — all from a single interface.

Boostex is built on the TRON blockchain, which enables instant transfers, ultra-low fees, and high network reliability. In 2025, we plan to launch our own blockchain with cross-chain features, making Boostex one of the most scalable and adaptive platforms in the crypto ecosystem.

2. Market Context & Challenges The cryptocurrency market is growing fast, but it still faces critical issues: - Wallets are often too complicated for newcomers; - Transaction fees reduce profitability for users; - Passive income opportunities are mostly reserved for experts.

Boostex solves these challenges: - Clean, intuitive interface; - Zero-fee internal transfers; - High-yield staking with minimal effort; - A powerful referral program that pays even without investment.

We believe every user deserves access to the next generation of financial tools — and we're building the system to make that happen.

3. Boostex Architecture 3.1. Core Infrastructure: TRON Boostex is powered by the TRON blockchain, known for its speed, scalability, and developer support.

Why TRON? - High throughput: TRON supports up to 2,000 transactions per second, with minimal latency. - Low fees: TRON's bandwidth and energy system lets us offer internal transactions at near-zero cost. - Smart contract support: TRON enables our staking, referral, and P2P logic to run efficiently and securely. - Robust security: TRON's DPoS mechanism ensures decentralization and fast finality.

3.2. Our Own Blockchain (Coming Soon) We plan to launch a proprietary blockchain based on modular architecture (e.g., Tendermint or Substrate) featuring: - Cross-chain bridges; - Custom smart contract logic; - DAO-ready governance modules.

This will allow Boostex to gain full independence, launch new token/NFT standards, and scale with no external limits.

4. Core Platform Features 4.1. Instant, Fee-Free Transfers Boostex users enjoy zero-fee transfers inside the platform — confirmed via TRON infrastructure but optimized through internal processing.

4.2. High-Yield Staking (120–150% APY) Boostex offers some of the highest staking returns on the market, with APYs from 120% to 150%, depending on: - Deposit amount; - Lock period; - Referral structure involvement.

Staking is designed to be simple and lucrative — available in just a few clicks, with future updates including: - Auto-compounding; - BOOST/USDT dual rewards; - Flexible pools and smart contract logic.

4.3. Promo Plan Boostex offers a 7-day trial plan for new users: - Fixed return; - Minimal entry requirements; - Full withdrawal after 1 week; - Great for trying out staking without commitment.

4.4. P2P Trading Platform Integrated peer-to-peer crypto marketplace: - User-to-user trades with escrow security; - Flexible fiat pairs; - Referral commissions on every partner trade.

If your referral sells crypto via P2P — you earn a share of the platform fee.

4.5. Launchpad Access Boostex features a built-in launchpad for participating in early-stage token sales: - IDO access via BOOST tokens; - Tiered allocations (top partners get priority); - Transparent and fair distribution model.

5. Referral System (5 Levels Deep) Boostex introduces a multi-level referral system with 5 depth levels — fully compatible with network marketing models.

Key benefits: - Payouts across 5 levels of your team; - Income from partner staking and P2P activity; - Bonus incentives for team growth and activity.

Example: - When your level 3 partner stakes \$1,000, you earn a percentage of their staked amount. - Level 5 partner makes a P2P trade → you earn from the transaction fees.

This system is implemented on-chain and guarantees full transparency and accountability.

6. BOOST Token Important: For security reasons and to prevent cloning, the smart contract for the BOOST token is not yet published. It will be made public after security audits are completed.

6.1. Token Utility BOOST serves multiple functions within the Boostex ecosystem: - Participation in launchpads; - Payment of transaction and platform fees; - Staking rewards; - Internal currency for services; - Future governance (DAO)

6.2. Token Distribution (Total Supply: 1,000,000,000 BOOST)

Launchpad (IDO): 300,000,000 – 30% – Unlock over 9 months
Liquidity Pool: 200,000,000 – 20% – Released during listings
Team & Advisors: 150,000,000 – 15% – 12-month lock, then 12-month linear unlock
Marketing & Partners: 100,000,000 – 10% – 25% at TGE, then 12-month vesting
Product Development: 100,000,000 – 10% – As features are implemented
Reserve Fund: 100,000,000 – 10% – Locked until 2026
Bounty & Referrals: 50,000,000 – 5% – Based on user activity

7. Security & Protection Boostex implements a multi-layered security system: - Two-Factor Authentication (2FA) via Google Authenticator - Phone Verification for all users - Telegram ID integration for alerts and identity - Anti-fraud detection systems - Logged activity for transparency

8. Integrations Boostex already integrates or plans to connect with: - Binance Pay - Trust Wallet - Telegram for user identity and support - Bank APIs for fiat ramps - Apple Pay / Google Pay - Developer APIs for Web3 tools

9. Roadmap 2023: - Research, prototype, blockchain selection (TRON) - MVP & Telegram bot

2024: - Wallet launch - Staking, referral system - P2P, marketing, promo plans

2025: - BOOST Token & Launchpad - Listings, SDK release, blockchain development

2026: - Boost Chain launch - DAO, NFTs, M2E apps, DeFi ecosystem

10. Team & Vision Our team: - 5+ years in crypto - Projects on TRON and Ethereum - International leadership - Focused on usability and sustainable income

11. Final Statement Boostex Wallet is a growing ecosystem of income, trust, and next-gen financial access. We're here to build value, together.

12. Updates and Future Outlook This is Part 1 of the Boostex White Paper. More coming soon: - BOOST smart contract - Boost Chain - DAO mechanics - New features & partnerships
